Collecting

Christian Winkler has been collecting everything even remotely connected with Cat for the last ten years. However, the friendships forged during this time are more important to him than the objects in his collection.

The Mack Granite with a combined flatbed and dumping option from Sword is a model with lots of details and high “play value”. We have put the model under the magnifying glass.

Models

The Volvo EC700C HR is an impressive sight due to its size and large demolition boom and attachment. Our report is about how the model scores overall.

We compare two road roller models. The first is a Hamm GRW 280 rubber wheel road roller from NZG. The second is a Hamm HD+110 tandem drum roller from WSI. Both models are very interesting and we are taking a closer look.

In the news

Only a clean paint job makes or breaks a superb, scratch or kit based model. We are demonstrating the finer points of the technique.

The International 350 Payhauler is a unique machine. To coincide with the release of the new 1:25 scale model from First Gear, we take a look at the prototype. Urs Peyer reports on his sightings of the truck at work.
